CONFERENCE THEMES

• Concrete technology problems

• Binders and admixtures for concrete

• Special concrete and composites

• Ready mix concrete in construction

• Precast concrete and factory technology

• Reinforced concrete structures of buildings and edifices, methods of analysis and designing

• Steel and non-metal reinforcement: tendencies and prospects

• Reinforced concrete in bridge-building and transport construction

• Concrete and reinforced concrete in the architecture

• Reinforced concrete in seismic construction and development of underground space

• Problems of durability for the concrete and reinforced concrete

• Restoration and rehabilitation of reinforced concrete buildings and structures

• Testing methods for materials, systems and structures

• Development of standardization and certification

• Environmental aspects of application of concrete and reinforced concrete

• Reinforced concrete use as the factor of sustainable development of construction
